

Multi Factor Authentication

Protection and Simplicity

MFA is an additional security measure that requires more than one authentication method from a user. The user is only granted login access if the multiple credentials provided are verified, successfully confirming their identity.

Did you know?

ScamWatch reports that in May 2019 alone, more than **\$1.7 million** has been lost due to attempts at gaining personal information from: hacking, phishing attacks, identity theft and remote access scams.

How can Diverse Services assist?

It's proven that password-only logons are vulnerable to theft through a range of hacking and social engineering techniques. This poses a serious risk to businesses where sensitive information is accessed and exploited.

Monitoring

Handover

We'll consult with you about your current exposure to risks and how MFA can offer protection. We'll plan a tailored solution which we will roll out across your business, including providing your staff members with training materials. Our services include frequent monitoring as well as generating regular reports for management.

Tailored for your needs

MFA has many functions that we're able to tailor to meet your needs. For example, controlled access for employees dependent on their location:

- **Office Location:** initial authentication after MFA configuration and standard password logins.
- **Other Domestic Location:** may require more frequent MFA checkins to confirm identity.
- **International Location:** may require extra MFA credentials or will not be provided any access depending on company policy.

Talk to us today to see how we can protect your business.
